J. L. AUSTIN

HOW TO DO THINGS WITH WORDS

The William James Lectures
delivered at Harvard University
in 1955

OXFORD
AT THE CLARENDON PRESS
1962
EDITOR'S PREFACE

The lectures here printed were delivered by Austin as the William James Lectures at Harvard University in 1955. In a short note, Austin says of the views which underlie these lectures that they 'were formed in 1939. I made use of them in an article on “Other Minds” published in the Proceedings of the Aristotelian Society, Supplementary Volume XX (1946), pages 173 ff., and I surfaced rather more of this iceberg shortly afterwards to several societies. . . .’ In each of the years 1952-4 Austin delivered lectures at Oxford under the title ‘Words and Deeds’, each year from a partially re-written set of notes, each of which covers approximately the same ground as the William James Lectures. For the William James Lectures a new set of notes was again prepared, though sheets of older notes were incorporated here and there; these remain the most recent notes by Austin on the topics covered, though he continued to lecture on ‘Words and Deeds’ at Oxford from these notes, and while doing so made minor corrections and a number of marginal additions.

The content of these lectures is here reproduced in print as exactly as possible and with the lightest editing. If Austin had published them himself he would certainly have recast them in a form more appropriate to print; he would surely have reduced the recapitulations of previous
lectures which occur at the beginning of the second and subsequent lectures; it is equally certain that Austin as a matter of course elaborated on the bare text of his notes when lecturing. But most readers will prefer to have a close approximation to what he is known to have written down rather than what it might be judged that he would have printed or thought that he probably said in lectures; they will not therefore begrudge the price to be paid in minor imperfections of form and style and inconsistencies of vocabulary.

But these lectures as printed do not exactly reproduce Austin’s written notes. The reason for this is that while for the most part, and particularly in the earlier part of each lecture, the notes were very full and written as sentences, with only minor omissions such as particles and articles, often at the end of the lecture they became much more fragmentary, while the marginal additions were often very abbreviated. At these points the notes were interpreted and supplemented in the light of remaining portions of the 1952–4 notes already mentioned. A further check was then possible by comparison with notes taken both in America and in England by those who attended the lectures, with the B.B.C. lecture on ‘Performative Utterances’ and a tape-recording of a lecture entitled ‘Performatives’ delivered at Gothenberg in October 1959. More thorough indications of the use of these aids are given in an appendix. While it seems possible that in this process of interpretation an occasional sentence may have crept into the text which Austin
would have repudiated, it seems very unlikely that at any point the main lines of Austin’s thought have been misrepresented.

The editor is grateful to all those who gave assistance by the loan of their notes, and for the gift of the tape-recording. He is especially indebted to Mr. G. J. Warnock, who went through the whole text most thoroughly and saved the editor from numerous mistakes; as a result of this aid the reader has a much improved text.

Lecture I

What I shall have to say here is neither difficult nor contentious; the only merit I should like to claim for it is that of being true, at least in parts. The phenomenon to be discussed is very widespread and obvious, and it cannot fail to have been already noticed, at least here and there, by others. Yet I have not found attention paid to it specifically.

It was for too long the assumption of philosophers that the business of a ‘statement’ can only be to ‘describe’ some state of affairs, or to ‘state some fact’, which it must do either truly or falsely. Grammarians, indeed, have regularly pointed out that not all ‘sentences’ are (used in making) statements:¹ there are, traditionally, besides (grammarians’) statements, also questions and exclamations, and sentences expressing commands or wishes or concessions. And doubtless philosophers have not intended to deny this, despite some loose use of ‘sentence’ for ‘statement’. Doubtless, too, both grammarians and philosophers have been aware that it is by no means easy to distinguish even questions, commands, and so on from statements by means of the few and jejune grammatical marks available, such as word order, mood, and the like:

¹ It is, of course, not really correct that a sentence ever is a statement: rather, it is used in making a statement, and the statement itself is a ‘logical construction’ out of the makings of statements.
though perhaps it has not been usual to dwell on the difficulties which this fact obviously raises. For how do we decide which is which? What are the limits and definitions of each?

But now in recent years, many things which would once have been accepted without question as ‘statements’ by both philosophers and grammarians have been scrutinized with new care. This scrutiny arose somewhat indirectly—at least in philosophy. First came the view, not always formulated without unfortunate dogmatism, that a statement (of fact) ought to be ‘verifiable’, and this led to the view that many ‘statements’ are only what may be called pseudo-statements. First and most obviously, many ‘statements’ were shown to be, as KANT perhaps first argued systematically, strictly nonsense, despite an unexceptionable grammatical form: and the continual discovery of fresh types of nonsense, unsystematic though their classification and mysterious though their explanation is too often allowed to remain, has done on the whole nothing but good. Yet we, that is, even philosophers, set some limits to the amount of nonsense that we are prepared to admit we talk: so that it was natural to go on to ask, as a second stage, whether many apparent pseudo-statements really set out to be ‘statements’ at all. It has come to be commonly held that many utterances which look like statements are either not intended at all, or only intended in part, to record or impart straightforward information about the facts: for example, ‘ethical propositions’ are perhaps intended, solely or partly, to evince
emotion or to prescribe conduct or to influence it in special ways. Here too KANT was among the pioneers. We very often also use utterances in ways beyond the scope at least of traditional grammar. It has come to be seen that many specially perplexing words embedded in apparently descriptive statements do not serve to indicate some specially odd additional feature in the reality reported, but to indicate (not to report) the circumstances in which the statement is made or reservations to which it is subject or the way in which it is to be taken and the like. To overlook these possibilities in the way once common is called the ‘descriptive’ fallacy; but perhaps this is not a good name, as ‘descriptive’ itself is special. Not all true or false statements are descriptions, and for this reason I prefer to use the word ‘Constative’. Along these lines it has by now been shown piecemeal, or at least made to look likely, that many traditional philosophical perplexities have arisen through a mistake—the mistake of taking as straightforward statements of fact utterances which are either (in interesting non-grammatical ways) nonsensical or else intended as something quite different.

Whatever we may think of any particular one of these views and suggestions, and however much we may deplore the initial confusion into which philosophical doctrine and method have been plunged, it cannot be doubted that they are producing a revolution in philosophy. If anyone wishes to call it the greatest and most salutary in its history, this is not, if you come to think of it, a
large claim. It is not surprising that beginnings have been piecemeal, with *parti pris*, and for extraneous aims; this is common with revolutions.

**PRELIMINARY ISOLATION OF THE PERFORMATIVE**

The type of utterance we are to consider here is not, of course, in general a type of nonsense; though misuse of it can, as we shall see, engender rather special varieties of 'nonsense'. Rather, it is one of our second class—the masqueraders. But it does not by any means necessarily masquerade as a statement of fact, descriptive or constative. Yet it does quite commonly do so, and that, oddly enough, when it assumes its most explicit form. Grammarians have not, I believe, seen through this 'disguise', and philosophers only at best incidentally. It will be convenient, therefore, to study it first in this misleading form, in order to bring out its characteristics by contrasting them with those of the statement of fact which it apes.

We shall take, then, for our first examples some utterances which can fall into no hitherto recognized grammatical category save that of 'statement', which are not nonsense, and which contain none of those verbal danger-signals which philosophers have by now detected or think

---

1 Everything said in these sections is provisional, and subject to revision in the light of later sections.

2 Of all people, jurists should be best aware of the true state of affairs. Perhaps some now are. Yet they will succumb to their own timorous fiction, that a statement of 'the law' is a statement of fact.
they have detected (curious words like ‘good’ or ‘all’, suspect auxiliaries like ‘ought’ or ‘can’, and dubious constructions like the hypothetical): all will have, as it happens, humdrum verbs in the first person singular present indicative active.¹ Utterances can be found, satisfying these conditions, yet such that

A. they do not ‘describe’ or ‘report’ or constate anything at all, are not ‘true or false’; and
B. the uttering of the sentence is, or is a part of, the doing of an action, which again would not normally be described as saying something.

This is far from being as paradoxical as it may sound or as I have meanly been trying to make it sound: indeed, the examples now to be given will be disappointing.

Examples:

(E. a) ‘I do (sc. take this woman to be my lawful wedded wife)—as uttered in the course of the marriage ceremony.²

(E. b) ‘I name this ship the Queen Elizabeth’—as uttered when smashing the bottle against the stem.

(E. c) ‘I give and bequeath my watch to my brother’ —as occurring in a will.

(E. d) ‘I bet you sixpence it will rain tomorrow.’

¹ Not without design: they are all ‘explicit’ performatives, and of that prepotent class later called ‘exercitatives’.
² [Austin realized that the expression ‘I do’ is not used in the marriage ceremony too late to correct his mistake. We have let it remain in the text as it is philosophically unimportant that it is a mistake. J. O. U.]
In these examples it seems clear that to utter the sentence (in, of course, the appropriate circumstances) is not to describe my doing of what I should be said in so uttering to be doing1 or to state that I am doing it: it is to do it. None of the utterances cited is either true or false: I assert this as obvious and do not argue it. It needs argument no more than that ‘damn’ is not true or false: it may be that the utterance ‘serves to inform you’—but that is quite different. To name the ship is to say (in the appropriate circumstances) the words ‘I name, &c.’. When I say, before the registrar or altar, &c., ‘I do’, I am not reporting on a marriage: I am indulging in it.

What are we to call a sentence or an utterance of this type?2 I propose to call it a performative sentence or a performative utterance, or, for short, ‘a performative’. The term ‘performative’ will be used in a variety of cognate ways and constructions, much as the term ‘imperative’ is.3 The name is derived, of course, from ‘perform’, the usual verb with the noun ‘action’: it indicates that the issuing of the utterance is the performing of an action

---

1 Still less anything that I have already done or have yet to do.
2 ‘Sentences’ form a class of ‘utterances’, which class is to be defined, so far as I am concerned, grammatically, though I doubt if the definition has yet been given satisfactorily. With performative utterances are contrasted, for example and essentially, ‘constative’ utterances: to issue a constative utterance (i.e. to utter it with a historical reference) is to make a statement. To issue a performative utterance is, for example, to make a bet. See further below on ‘illocutions’.
3 Formerly I used ‘performatory’: but ‘performative’ is to be preferred as shorter, less ugly, more tractable, and more traditional in formation.
—it is not normally thought of as just saying something.

A number of other terms may suggest themselves, each of which would suitably cover this or that wider or narrower class of performatives: for example, many performatives are *contractual* (‘I bet’) or *declaratory* (‘I declare war’) utterances. But no term in current use that I know of is nearly wide enough to cover them all. One technical term that comes nearest to what we need is perhaps ‘operative’, as it is used strictly by lawyers in referring to that part, i.e. those clauses, of an instrument which serves to effect the transaction (conveyance or what not) which is its main object, whereas the rest of the document merely ‘recites’ the circumstances in which the transaction is to be effected. But ‘operative’ has other meanings, and indeed is often used nowadays to mean little more than ‘important’. I have preferred a new word, to which, though its etymology is not irrelevant, we shall perhaps not be so ready to attach some preconceived meaning.

**CAN SAYING MAKE IT SO?**

Are we then to say things like this:

‘To marry is to say a few words’, or
‘Betting is simply saying something’?

Such a doctrine sounds odd or even flippant at first, but with sufficient safeguards it may become not odd at all.

---

1 I owe this observation to Professor H. L. A. Hart.
A sound initial objection to them may be this; and it is not without some importance. In very many cases it is possible to perform an act of exactly the same kind not by uttering words, whether written or spoken, but in some other way. For example, I may in some places effect marriage by cohabiting, or I may bet with a totalisator machine by putting a coin in a slot. We should then, perhaps, convert the propositions above, and put it that 'to say a few certain words is to marry' or 'to marry is, in some cases, simply to say a few words' or 'simply to say a certain something is to bet'.

But probably the real reason why such remarks sound dangerous lies in another obvious fact, to which we shall have to revert in detail later, which is this. The uttering of the words is, indeed, usually a, or even the, leading incident in the performance of the act (of betting or what not), the performance of which is also the object of the utterance, but it is far from being usually, even if it is ever, the sole thing necessary if the act is to be deemed to have been performed. Speaking generally, it is always necessary that the circumstances in which the words are uttered should be in some way, or ways, appropriate, and it is very commonly necessary that either the speaker himself or other persons should also perform certain other actions, whether 'physical' or 'mental' actions or even acts of uttering further words. Thus, for naming the ship, it is essential that I should be the person appointed to name her, for (Christian) marrying, it is essential that I should not be already married with a wife
living, sane and undivorced, and so on: for a bet to have been made, it is generally necessary for the offer of the bet to have been accepted by a taker (who must have done something, such as to say ‘Done’), and it is hardly a gift if I say ‘I give it you’ but never hand it over.

So far, well and good. The action may be performed in ways other than by a performative utterance, and in any case the circumstances, including other actions, must be appropriate. But we may, in objecting, have something totally different, and this time quite mistaken, in mind, especially when we think of some of the more awe-inspiring performatives such as ‘I promise to . . . ’. Surely the words must be spoken ‘seriously’ and so as to be taken ‘seriously’? This is, though vague, true enough in general—it is an important commonplace in discussing the purport of any utterance whatsoever. I must not be joking, for example, nor writing a poem. But we are apt to have a feeling that their being serious consists in their being uttered as (merely) the outward and visible sign, for convenience or other record or for information, of an inward and spiritual act: from which it is but a short step to go on to believe or to assume without realizing that for many purposes the outward utterance is a description, true or false, of the occurrence of the inward performance. The classic expression of this idea is to be found in the Hippolytus (1. 612), where Hippolytus says

\[ \text{ἡ γλῶσσα ὁμόωχ', ἤ δὲ φρὴν ἀνωμοτός}, \]

i.e. ‘my tongue swore to, but my heart (or mind or other
How to do things with Words

How to do things with Words

backstage artiste) did not'. Thus 'I promise to . . .' obliges me—puts on record my spiritual assumption of a spiritual shackle.

It is gratifying to observe in this very example how excess of profundity, or rather solemnity, at once paves the way for immodality. For one who says 'promising is not merely a matter of uttering words! It is an inward and spiritual act!' is apt to appear as a solid moralist standing out against a generation of superficial theorizers: we see him as he sees himself, surveying the invisible depths of ethical space, with all the distinction of a specialist in the *sui generis*. Yet he provides Hippolytus with a let-out, the bigamist with an excuse for his 'I do' and the welsher with a defence for his 'I bet'. Accuracy and morality alike are on the side of the plain saying that *our word is our bond*.

If we exclude such fictitious inward acts as this, can we suppose that any of the other things which certainly are normally required to accompany an utterance such as 'I promise that . . .' or 'I do (take this woman . . .)' are in fact described by it, and consequently do by their presence make it true or by their absence make it false? Well, taking the latter first, we shall next consider what we actually do say about the utterance concerned when one or another of its normal concomitants is absent. In no case do we say that the utterance was false but rather

---

1 But I do not mean to rule out all the offstage performers—the lights men, the stage manager, even the prompter; I am objecting only to certain officious understudies.
that the utterance—or rather the act,¹ e.g. the promise—was void, or given in bad faith, or not implemented, or the like. In the particular case of promising, as with many other performatives, it is appropriate that the person uttering the promise should have a certain intention, viz. here to keep his word: and perhaps of all concomitants this looks the most suitable to be that which ‘I promise’ does describe or record. Do we not actually, when such intention is absent, speak of a ‘false’ promise? Yet so to speak is not to say that the utterance ‘I promise that . . .’ is false, in the sense that though he states that he does, he doesn’t, or that though he describes he misdescribes—misreports. For he does promise: the promise here is not even void, though it is given in bad faith. His utterance is perhaps misleading, probably deceitful and doubtless wrong, but it is not a lie or a misstatement. At most we might make out a case for saying that it implies or insinuates a falsehood or a misstatement (to the effect that he does intend to do something): but that is a very different matter. Moreover, we do not speak of a false bet or a false christening; and that we do speak of a false promise need commit us no more than the fact that we speak of a false move. ‘False’ is not necessarily used of statements only.

¹ We shall avoid distinguishing these precisely because the distinction is not in point.
LECTURE II

We were to consider, you will remember, some cases and senses (only some, Heaven help us!) in which to say something is to do something; or in which by saying or in saying something we are doing something. This topic is one development—there are many others—in the recent movement towards questioning an age-old assumption in philosophy—the assumption that to say something, at least in all cases worth considering, i.e. all cases considered, is always and simply to state something. This assumption is no doubt unconscious, no doubt is wrong, but it is wholly natural in philosophy apparently. We must learn to run before we can walk. If we never made mistakes how should we correct them?

I began by drawing your attention, by way of example, to a few simple utterances of the kind known as performatories or performatives. These have on the face of them the look—or at least the grammatical make-up—of ‘statements’; but nevertheless they are seen, when more closely inspected, to be, quite plainly, not utterances which could be ‘true’ or ‘false’. Yet to be ‘true’ or ‘false’ is traditionally the characteristic mark of a statement. One of our examples was, for instance, the utterance ‘I do’ (take this woman to be my lawful wedded wife), as
uttered in the course of a marriage ceremony. Here we should say that in saying these words we are *doing* something—namely, marrying, rather than *reporting* something, namely that we are marrying. And the act of marrying, like, say, the act of betting, is at least *preferably* (though still not *accurately*) to be described as *saying certain words*, rather than as performing a different, inward and spiritual, action of which these words are merely the outward and audible sign. That this is so can perhaps hardly be *proved*, but it is, I should claim, a fact.

It is worthy of note that, as I am told, in the American law of evidence, a report of what someone else said is admitted as evidence if what he said is an utterance of our performative kind: because this is regarded as a report not so much of something he *said*, as which it would be hear-say and not admissible as evidence, but rather as something he *did*, an action of his. This coincides very well with our initial feelings about performatives.

So far then we have merely felt the firm ground of prejudice slide away beneath our feet. But now how, as philosophers, are we to proceed? One thing we might go on to do, of course, is to take it all back: another would be to bog, by logical stages, down. But all this must take time. Let us first at least concentrate attention on the little matter already mentioned in passing—this matter of 'the appropriate circumstances'. To bet is not, as I pointed out in passing, merely to utter the words 'I bet, &c.': someone might do that all right, and yet we might still not agree that he had in fact, or at least entirely,
succeeded in betting. To satisfy ourselves of this, we have only, for example, to announce our bet after the race is over. Besides the uttering of the words of the so-called performative, a good many other things have as a general rule to be right and to go right if we are to be said to have happily brought off our action. What these are we may hope to discover by looking at and classifying types of case in which something goes wrong and the act—marrying, betting, bequeathing, christening, or what not—is therefore at least to some extent a failure: the utterance is then, we may say, not indeed false but in general unhappy. And for this reason we call the doctrine of the things that can be and go wrong on the occasion of such utterances, the doctrine of the Infelicities.

Suppose we try first to state schematically—and I do not wish to claim any sort of finality for this scheme—some at least of the things which are necessary for the smooth or ‘happy’ functioning of a performative (or at least of a highly developed explicit performative, such as we have hitherto been alone concerned with), and then give examples of infelicities and their effects. I fear, but at the same time of course hope, that these necessary conditions to be satisfied will strike you as obvious.

(A. 1) There must exist an accepted conventional procedure having a certain conventional effect, that procedure to include the uttering of certain words by certain persons in certain circumstances, and further,
(A. 2) the particular persons and circumstances in a given case must be appropriate for the invocation of the particular procedure invoked.

(B. 1) The procedure must be executed by all participants both correctly and completely.

(B. 2) Where, as often, the procedure is designed for use by persons having certain thoughts or feelings, or for the inauguration of certain consequential conduct on the part of any participant, then a person participating in and so invoking the procedure must in fact have those thoughts or feelings, and the participants must intend so to conduct themselves,\(^1\) and further

(Γ. 1) must actually so conduct themselves subsequently.

Now if we sin against any one (or more) of these six rules, our performative utterance will be (in one way or another) unhappy. But, of course, there are considerable differences between these 'ways' of being unhappy—ways which are intended to be brought out by the letter-numerals selected for each heading.

The first big distinction is between all the four rules A and B taken together, as opposed to the two rules Γ (hence the use of Roman as opposed to Greek letters). If we offend against any of the former rules (A's or B's) —that is if we, say, utter the formula incorrectly, or if,

\(^1\) It will be explained later why the having of these thoughts, feelings, and intentions is not included as just one among the other 'circumstances' already dealt with in (A).
say, we are not in a position to do the act because we are, say, married already, or it is the purser and not the captain who is conducting the ceremony, then the act in question, e.g. marrying, is not successfully performed at all, does not come off, is not achieved. Whereas in the two $I$ cases the act is achieved, although to achieve it in such circumstances, as when we are, say, insincere, is an abuse of the procedure. Thus, when I say 'I promise' and have no intention of keeping it, I have promised but. . . .

We need names for referring to this general distinction, so we shall call in general those infelicities A. I–B. 2 which are such that the act for the performing of which, and in the performing of which, the verbal formula in question is designed, is not achieved, by the name MISFIRES: and on the other hand we may christen those infelicities where the act is achieved ABUSES (do not stress the normal connotations of these names!) When the utterance is a misfire, the procedure which we purport to invoke is disallowed or is botched: and our act (marrying, &c.) is void or without effect, &c. We speak of our act as a purported act, or perhaps an attempt—or we use such an expression as 'went through a form of marriage' by contrast with 'married'. On the other hand, in the $I$ cases, we speak of our infelicitous act as 'professed' or 'hollow' rather than 'purported' or 'empty', and as not implemented, or not consummated, rather than as void or without effect. But let me hasten to add that these distinctions are not hard and fast, and more especially that such words as 'purported' and 'professed' will not
bear very much stressing. Two final words about being void or without effect. This does not mean, of course, to say that we won’t have done anything: lots of things will have been done—we shall most interestingly have committed the act of bigamy—but we shall not have done the purported act, viz. marrying. Because despite the name, you do not when bigamous marry twice. (In short, the algebra of marriage is Boolean.) Further, ‘without effect’ does not here mean ‘without consequences, results, effects’.

Next, we must try to make clear the general distinction between the A cases and the B cases, among the misfires. In both of the cases labelled A there is misinvocation of a procedure—either because there is, speaking vaguely, no such procedure, or because the procedure in question cannot be made to apply in the way attempted. Hence infelicities of this kind A may be called Misinvocations. Among them, we may reasonably christen the second sort—where the procedure does exist all right but can’t be applied as purported—Misapplications. But I have not succeeded in finding a good name for the other, former, class. By contrast with the A cases, the notion of the B cases is rather that the procedure is all right, and it does apply all right, but we muffle the execution of the ritual with more or less dire consequences: so B cases as opposed to A cases will be called Misexecutions as opposed to Misinvocations: the purported act is vitiated by a flaw or hitch in the conduct of the ceremony. The Class B. 1 is that of Flaws, the Class B. 2 that of Hitches.
We get then the following scheme:

\[ \text{Infelicities} \]

\[
\begin{array}{ccc}
AB & \Gamma \\
\text{Misfires} & \text{Abuses} \\
\text{Act purported but void} & \text{Act professed but hollow} \\
A & B \\
\text{Misinvocations} & \text{Misexecutions} & \text{Insincerities} \\
\text{Act disallowed} & \text{Act vitiates} & ? \\
A. 1 & A. 2 & \Gamma. 1 & \Gamma. 2 \\
\text{Misapplica-Flaws} & \text{Hitches} \\
? &
\end{array}
\]

I expect some doubts will be entertained about A. 1 and \( \Gamma. 2 \); but we will postpone them for detailed consideration shortly.

But before going on to details, let me make some general remarks about these infelicities. We may ask:

1. To what variety of ‘act’ does the notion of infelicity apply?
2. How complete is this classification of infelicity?
3. Are these classes of infelicity mutually exclusive?

Let us take these questions in (that) order.

1. How widespread is infelicity?

Well, it seems clear in the first place that, although it has excited us (or failed to excite us) in connexion with certain acts which are or are in part acts of uttering words, infelicity is an ill to which all acts are heir which have

\[ 1 \text{ [Austin from time to time used other names for the different infelicities. For interest some are here given: A. 1, Non-plays; A. 2, Misplays; B, Miscarriages; B. 1, Misexecutions; B. 2, Non-executions; } \Gamma, \text{ Disrespects; } \Gamma. 1, \text{ Dissimulations; } \Gamma. 2, \text{ Non-fulfilments, Disloyalties, Infractions, Indisciplines, Breaches. J. O. U.]} \]
the general character of ritual or ceremonial, all conventional acts: not indeed that every ritual is liable to every form of infelicity (but then nor is every performative utterance). This is clear if only from the mere fact that many conventional acts, such as betting or conveyance of property, can be performed in non-verbal ways. The same sorts of rule must be observed in all such conventional procedures—we have only to omit the special reference to verbal utterance in our A. This much is obvious.

But, furthermore, it is worth pointing out—reminding you—how many of the ‘acts’ which concern the jurist are or include the utterance of performatives, or at any rate are or include the performance of some conventional procedures. And of course you will appreciate that in this way and that writers on jurisprudence have constantly shown themselves aware of the varieties of infelicity and even at times of the peculiarities of the performative utterance. Only the still widespread obsession that the utterances of the law, and utterances used in, say, ‘acts in the law’, must somehow be statements true or false, has prevented many lawyers from getting this whole matter much straighter than we are likely to—and I would not even claim to know whether some of them have not already done so. Of more direct concern to us, however, is to realize that, by the same token, a great many of the acts which fall within the province of Ethics are not, as philosophers are too prone to assume, simply in the last resort physical movements: very many
of them have the general character, in whole or part, of conventional or ritual acts, and are therefore, among other things, exposed to infelicity.

Lastly we may ask—and here I must let some of my cats on the table—does the notion of infelicity apply to utterances which are statements? So far we have produced the infelicity as characteristic of the performative utterance, which was ‘defined’ (if we can call it so much) mainly by contrast with the supposedly familiar ‘statement’. Yet I will content myself here with pointing out that one of the things that has been happening lately in philosophy is that close attention has been given even to ‘statements’ which, though not false exactly nor yet ‘contradictory’, are yet outrageous. For instance, statements which refer to something which does not exist as, for example, ‘The present King of France is bald’. There might be a temptation to assimilate this to purporting to bequeath something which you do not own. Is there not a presupposition of existence in each? Is not a statement which refers to something which does not exist not so much false as void? And the more we consider a statement not as a sentence (or proposition) but as an act of speech (out of which the others are logical constructions) the more we are studying the whole thing as an act. Or again, there are obvious similarities between a lie and a false promise. We shall have to return to this matter later.¹

(2) Our second question was: How complete is this classification?

¹ [See pp. 47 ff. J. O. U.]
(i) Well, the first thing to remember is that, since in uttering our performatives we are undoubtedly in a sound enough sense ‘performing actions’, then, as actions, these will be subject to certain whole dimensions of unsatisfactoriness to which all actions are subject but which are distinct—or distinguishable—from what we have chosen to discuss as infelicities. I mean that actions in general (not all) are liable, for example, to be done under duress, or by accident, or owing to this or that variety of mistake, say, or otherwise unintentionally. In many such cases we are certainly unwilling to say of some such act simply that it was done or that he did it. I am not going into the general doctrine here: in many such cases we may even say the act was ‘void’ (or voidable for duress or undue influence) and so forth. Now I suppose some very general high-level doctrine might embrace both what we have called infelicities and these other ‘unhappy’ features of the doing of actions—in our case actions containing a performative utterance—in a single doctrine: but we are not including this kind of unhappiness—we must just remember, though, that features of this sort can and do constantly obtrude into any case we are discussing. Features of this sort would normally come under the heading of ‘extenuating circumstances’ or of ‘factors reducing or abrogating the agent’s responsibility’, and so on.

(ii) Secondly, as utterances our performatives are also heir to certain other kinds of ill which infect all utterances. And these likewise, though again they might be
brought into a more general account, we are deliberately at present excluding. I mean, for example, the following: a performative utterance will, for example, be in a peculiar way hollow or void if said by an actor on the stage, or if introduced in a poem, or spoken in soliloquy. This applies in a similar manner to any and every utterance—a sea-change in special circumstances. Language in such circumstances is in special ways—intelligibly—used not seriously, but in ways parasitic upon its normal use—ways which fall under the doctrine of the etiolations of language. All this we are excluding from consideration. Our performative utterances, felicitous or not, are to be understood as issued in ordinary circumstances.

(iii) It is partly in order to keep this sort of consideration at least for the present out of it, that I have not here introduced a sort of ‘infelicity’—it might really be called such—arising out of ‘misunderstanding’. It is obviously necessary that to have promised I must normally

(A) have been heard by someone, perhaps the promisee;

(B) have been understood by him as promising.

If one or another of these conditions is not satisfied, doubts arise as to whether I have really promised, and it might be held that my act was only attempted or was void. Special precautions are taken in law to avoid this and other infelicities, e.g. in the serving of writs or summonses. This particular very important considera-
tion we shall have to return to later in another connexion.

(3) Are these cases of infelicity mutually exclusive? The answer to this is obvious.

(a) No, in the sense that we can go wrong in two ways at once (we can insincerely promise a donkey to give it a carrot).

(b) No, more importantly, in the sense that the ways of going wrong 'shade into one another' and 'overlap', and the decision between them is 'arbitrary' in various ways.

Suppose, for example, I see a vessel on the stocks, walk up and smash the bottle hung at the stem, proclaim 'I name this ship the Mr. Stalin' and for good measure kick away the chocks: but the trouble is, I was not the person chosen to name it (whether or not—an additional complication—Mr. Stalin was the destined name; perhaps in a way it is even more of a shame if it was). We can all agree

(1) that the ship was not thereby named;¹
(2) that it is an infernal shame.

One could say that I 'went through a form of' naming the vessel but that my 'action' was 'void' or 'without effect', because I was not a proper person, had not the 'capacity', to perform it: but one might also and

¹ Naming babies is even more difficult; we might have the wrong name and the wrong cleric—that is, someone entitled to name babies but not intended to name this one.
alternatively say that, where there is not even a pretence of capacity or a colourable claim to it, then there is no accepted conventional procedure; it is a mockery, like a marriage with a monkey. Or again one could say that part of the procedure is getting oneself appointed. When the saint baptized the penguins, was this void because the procedure of baptizing is inappropriate to be applied to penguins, or because there is no accepted procedure of baptizing anything except humans? I do not think that these uncertainties matter in theory, though it is pleasant to investigate them and in practice convenient to be ready, as jurists are, with a terminology to cope with them.
In our first lecture we isolated in a preliminary way the performative utterance as not, or not merely, saying something but doing something, as not a true or false report of something. In the second, we pointed out that though it was not ever true or false it still was subject to criticism—could be unhappy, and we listed six of these types of Infelicity. Of these, four were such as to make the utterance Misfire, and the act purported to be done null and void, so that it does not take effect; while two, on the contrary, only made the professed act an abuse of the procedure. So then we may seem to have armed ourselves with two shiny new concepts with which to crack the crib of Reality, or as it may be, of Confusion—two new keys in our hands, and of course, simultaneously two new skids under our feet. In philosophy, forearmed should be forewarned. I then stalled around for some time by discussing some general questions about the concept of the Infelicity, and set it in its general place in a new map of the field. I claimed (1) that it applied to all ceremonial acts, not merely verbal ones, and that these are more common than is appreciated; I admitted (2) that our list was not complete, and that there are indeed other whole dimensions of what might be reasonably called ‘unhappiness’ affecting ceremonial
performances in general and utterances in general, dimensions which are certainly the concern of philosophers; and (3) that, of course, different infelicities can be combined or can overlap and that it can be more or less an optional matter how we classify some given particular example.

We were next to take some examples of infelicities—of the infringement of our six rules. Let me first remind you of rule A. 1, that there must exist an accepted conventional procedure having a certain conventional effect, that procedure to include the uttering of certain words by certain persons in certain circumstances; and rule A. 2 of course, completing it, was that the particular persons and circumstances in a given case must be appropriate for the invocation of the particular procedure invoked.

_There must exist an accepted conventional procedure having a certain conventional effect, the procedure to include the uttering of certain words by certain persons in certain circumstances._

A. 1

The latter part, of course, is simply designed to restrict the rule to cases of utterances, and is not important in principle.

Our formulation of this rule contains the two words 'exist' and 'accepted' but we may reasonably ask whether there can be any sense to 'exist' except 'to be accepted', and whether 'be in (general) use' should not be preferred to both. Hence we must not say '(1) exist, (2) be accepted'
at any rate. Well, in deference to this reasonable query, let us take just ‘accepted’ first.

If somebody issues a performative utterance, and the utterance is classed as a misfire because the procedure invoked is *not accepted*, it is presumably persons other than the speaker who do not accept it (at least if the speaker is speaking *seriously*). What would be an example? Consider ‘I divorce you’, said to a wife by her husband in a Christian country, and both being Christians rather than Mohammedans. In this case it might be said, ‘nevertheless he has not (successfully) divorced her: we admit only some other verbal or non-verbal procedure’; or even possibly ‘we (*we*) do not admit any procedure at all for effecting divorce—marriage is indissoluble’. This may be carried so far that we reject what may be called a *whole code* of procedure, e.g. the code of honour involving duelling: for example, a challenge may be issued by ‘my seconds will call on you’, which is equivalent to ‘I challenge you’, and we merely shrug it off. The general position is exploited in the unhappy story of Don Quixote.

Of course, it will be evident that it is comparatively simple if we *never* admit any ‘such’ procedure at all—that is, any procedure at all for doing that sort of thing, or that procedure *anyway* for doing that particular thing. But equally possible are the cases where we do sometimes—in certain circumstances or at certain hands—accept a procedure, but *not* in any other circumstances or at other hands. And here we may often be in doubt (as in
the naming example above) whether an infelicity should be brought into our present class A. 1 or rather into A. 2 (or even B. 1 or B. 2). For example, at a party, you say, when picking sides, 'I pick George': George grunts 'I'm not playing.' Has George been picked? Undoubtedly, the situation is an unhappy one. Well, we may say, you have not picked George, whether because there is no convention that you can pick people who aren't playing or because George in the circumstances is an inappropriate object for the procedure of picking. Or on a desert island you may say to me 'Go and pick up wood'; and I may say 'I don't take orders from you' or 'you're not entitled to give me orders'—I do not take orders from you when you try to 'assert your authority' (which I might fall in with but may not) on a desert island, as opposed to the case when you are the captain on a ship and therefore genuinely have authority.

Now we could say, bringing the case under A. 2 (Misapplication): the procedure—uttering certain words, &c.—was O.K. and accepted, but the circumstances in which it was invoked or the persons who invoked it were wrong: 'I pick' is only in order when the object of the verb is 'a player', and a command is in order only when the subject of the verb is 'a commander' or 'an authority'.

Or again we could say, bringing the case under rule B. 2 (and perhaps we should reduce the former suggestion to this): the procedure has not been completely executed; because it is a necessary part of it that, say, the person to be the object of the verb 'I order to . . . ' must, by
some previous procedure, tacit or verbal, have first consti-
tuted the person who is to do the ordering an authority,
e.g. by saying 'I promise to do what you order me to do.'
This is, of course, one of the uncertainties—and a purely
general one really—which underlie the debate when we
discuss in political theory whether there is or is not or
should be a social contract.

It appears to me that it does not matter in principle
at all how we decide in particular cases—though we may
agree, either on the facts or by introducing further defini-
tions, to prefer one solution rather than another—but
that it is important in principle to be clear:

(1) as against B. 2 that however much we take into the pro-
cedure it would still be possible for someone to reject it all;

(2) that for a procedure to be accepted involves more
than for it merely to be the case that it is in fact generally
used, even actually by the persons now concerned; and
that it must remain in principle open for anyone to
reject any procedure—or code of procedures—even one
that he has already hitherto accepted—as may happen
with, for example, the code of honour. One who does
so is, of course, liable to sanctions; others refuse to play
with him or say that he is not a man of honour. Above all
all must not be put into flat factual circumstances; for
this is subject to the old objection to deriving an 'ought'
from an 'is'. (Being accepted is not a circumstance in the
right sense.) With many procedures, for example play-
ing games, however appropriate the circumstances may
be I may still not be playing, and, further, we should
How to do things with Words

contend that in the last resort it is doubtful if ‘being accepted’ is definable as being ‘usually’ employed. But this is a more difficult matter.

Now secondly, what could be meant by the suggestion that sometimes a procedure may not even exist—as distinct from the question whether it is accepted, and by this or that group, or not?¹

(i) We have the case of procedures which ‘no longer exist’ merely in the sense that though once generally accepted, they are no longer generally accepted, or even accepted by anybody; for example the case of challenging; and

(ii) we have even the case of procedures which someone is initiating. Sometimes he may ‘get away with it’ like, in football, the man who first picked up the ball and ran. Getting away with things is essential, despite the suspicious terminology. Consider a possible case: to say ‘you were cowardly’ may be to reprimand you or to insult you: and I can make my performance explicit by saying ‘I reprimand you’, but I cannot do so by saying ‘I insult you’—the reasons for this do not matter here.²

¹ If we object here to saying that there is doubt whether it ‘exists’—as well we may, for the word gives us currently fashionable creeps which are in general undoubtedly legitimate, we might say that the doubt is rather as to the precise nature or definition or comprehension of the procedure which undoubtedly does exist and is accepted.

² Many such possible procedures and formulas would be disadvantageous if recognized; for example, perhaps we ought not to allow the formula ‘I promise you that I’ll thrash you’. But I am told that in the hey-day of student duelling in Germany it was the custom for members of one club to march past members of a rival club, each drawn up in file, and then for each to say to his chosen opponent as he passed, quite politely, ‘Beleidigung’, which means ‘I insult you’.
All that does matter is that a special variety of non-play\(^1\) can arise if someone does say ‘I insult you’: for while insulting is a conventional procedure, and indeed primarily a verbal one, so that in a way we cannot help understanding the procedure that someone who says ‘I insult you’ is purporting to invoke, yet we are bound to non-play him, not merely because the convention is not accepted, but because we vaguely feel the presence of some bar, the nature of which is not immediately clear, against its ever being accepted.

Much more common, however, will be cases where it is uncertain how far a procedure extends—which cases it covers or which varieties it could be made to cover. It is inherent in the nature of any procedure that the limits of its applicability, and therewith, of course, the ‘precise’ definition of the procedure, will remain vague. There will always occur difficult or marginal cases where nothing in the previous history of a conventional procedure will decide conclusively whether such a procedure is or is not correctly applied to such a case. Can I baptize a dog, if it is admittedly rational? Or should I be non-played? The law abounds in such difficult decisions—in which, of course, it becomes more or less arbitrary whether we regard ourselves as deciding (A. 1) that a convention does not exist or as deciding (A. 2) that the circumstances are not appropriate for the invocation of

\(^1\) ['Non-play' was at one time Austin’s name for the category A. 1 of infelicities. He later rejected it but it remains in his notes at this point. J. O. U.]
a convention which undoubtedly does exist: either way, we shall tend to be bound by the ‘precedent’ we set. Lawyers usually prefer the latter course, as being to apply rather than to make law.

There is, however, a further type of case which may arise, which might be classified in many ways, but which deserves a special mention.

The performative utterances I have taken as examples are all of them highly developed affairs, of the kind that we shall later call *explicit* performatives, by contrast with merely *implicit* performatives. That is to say, they (all) begin with or include some highly significant and unambiguous expression such as ‘I bet’, ‘I promise’, ‘I bequeath’—an expression very commonly also used in naming the act which, in making such an utterance, I am performing—for example betting, promising, bequeathing, &c. But, of course, it is both obvious and important that we can on occasion use the utterance ‘go’ to achieve practically the same as we achieve by the utterance ‘I order you to go’: and we should say cheerfully in either case, describing subsequently what someone did, that he ordered me to go. It may, however, be uncertain in fact, and, so far as the mere utterance is concerned, is always left uncertain when we use so inexplicit a formula as the mere imperative ‘go’, whether the utterer is ordering (or is purporting to order) me to go or merely advising, entreating, or what not me to go. Similarly ‘There is a bull in the field’ may or may not be a warning, for I
might just be describing the scenery and 'I shall be there' may or may not be a promise. Here we have primitive as distinct from explicit performatives; and there may be nothing in the circumstances by which we can decide whether or not the utterance is performative at all. Anyway, in a given situation it can be open to me to take it as either one or the other. It was a performative formula—perhaps—but the procedure in question was not sufficiently explicitly invoked. Perhaps I did not take it as an order or was not anyway bound to take it as an order. The person did not take it as a promise: i.e. in the particular circumstance he did not accept the procedure, on the ground that the ritual was incompletely carried out by the original speaker.

We could assimilate this to a faulty or incomplete performance (B. 1 or B. 2): except that it is complete really, though not unambiguous. (In the law, of course, this kind of inexplicit performative will normally be brought under B. 1 or B. 2—it is made a rule that to bequeath inexplicitly, for instance, is either an incorrect or an incomplete performance; but in ordinary life there is no such rigidity.) We could also assimilate it to Misunderstandings (which we are not yet considering): but it would be a special kind, concerning the force of the utterance as opposed to its meaning. And the point is not here just that the audience did not understand but that it did not have to understand, e.g. to take it as an order.

We might indeed even assimilate it to A. 2 by saying
that the procedure is not designed for use where it is not clear that it is being used—which use makes it altogether void. We might claim that it is only to be used in circumstances which make it unambiguously clear that it is being used. But this is a counsel of perfection.

A. 2. The particular persons and circumstances in a given case must be appropriate for the invocation of the particular procedure invoked.

We turn next to infringements of A. 2, the type of infelicity which we have called Misapplications. Examples here are legion. ‘I appoint you’, said when you have already been appointed, or when someone else has been appointed, or when I am not entitled to appoint, or when you are a horse: ‘I do’, said when you are in the prohibited degrees of relationship, or before a ship’s captain not at sea: ‘I give’, said when it is not mine to give or when it is a pound of my living and non-detached flesh. We have various special terms for use in different types of case—‘ultra vires’, ‘incapacity’, ‘not a fit or proper object (or person, &c.)’, ‘not entitled’, and so on.

The boundary between ‘inappropriate persons’ and ‘inappropriate circumstances’ will necessarily not be a very hard and fast one. Indeed ‘circumstances’ can clearly be extended to cover in general ‘the natures’ of all persons participating. But we must distinguish between cases where the inappropriateness of persons, objects, names, &c., is a matter of ‘incapacity’ and simpler cases
where the object or 'performer' is of the wrong kind or type. This again is a roughish and vanishing distinction, yet not without importance (in, say, the law). Thus we must distinguish the cases of a clergyman baptizing the wrong baby with the right name or baptizing a baby 'Albert' instead of 'Alfred', from those of saying 'I baptize this infant 2704' or 'I promise I will bash your face in' or appointing a horse as Consul. In the latter cases there is something of the wrong kind or type included, whereas in the others the inappropriateness is only a matter of incapacity.

Some overlaps of A. 2 with A. 1 and B. 1 have already been mentioned: perhaps we are more likely to call it a misinvocation (A. 1) if the person as such is inappropriate than if it is just because it is not the duly appointed one—if nothing—no antecedent procedure or appointment, &c. —could have put the matter in order. On the other hand, if we take the question of appointment literally (position as opposed to status) we might class the infelicity as a matter of wrongly executed rather than as misapplied procedure—for example, if we vote for a candidate before he has been nominated. The question here is how far we are to go back in the 'procedure'.

Next we have examples of B (already, of course, trenched upon) called Misexecutions.

B. 1. The procedure must be executed by all participants correctly.

These are flaws. They consist in the use of, for example,
wrong formulas—there is a procedure which is appropriate to the persons and the circumstances, but it is not gone through correctly. Examples are more easily seen in the law; they are naturally not so definite in ordinary life, where allowances are made. The use of inexplicit formulas might be put under this heading. Also under this heading falls the use of vague formulas and uncertain references, for example if I say 'my house' when I have two, or if I say 'I bet you the race won't be run today' when more than one race was arranged.

This is a different question from that of misunderstanding or slow up-take by the audience; a flaw in the ritual is involved, however the audience took it. One of the things that cause particular difficulty is the question whether when two parties are involved 'consensus ad idem' is necessary. Is it essential for me to secure correct understanding as well as everything else? In any case this is clearly a matter falling under the B rules and not under the I rules.

B. 2. The procedure must be executed by all participants completely.

These are hitches; we attempt to carry out the procedure but the act is abortive. For example: my attempt to make a bet by saying 'I bet you sixpence' is abortive unless you say 'I take you on' or words to that effect; my attempt to marry by saying 'I will' is abortive if the woman says 'I will not'; my attempt to challenge you is abortive if I say 'I challenge you' but I fail to send
round my seconds; my attempt ceremonially to open a library is abortive if I say 'I open this library' but the key snaps in the lock; conversely the christening of a ship is abortive if I kick away the chocks before I have said 'I launch this ship'. Here again, in ordinary life, a certain laxness in procedure is permitted—otherwise no university business would ever get done!

Naturally sometimes uncertainties about whether anything further is required or not will arise. For example, are you required to accept the gift if I am to give you something? Certainly in formal business acceptance is required, but is this ordinarily so? Similar uncertainty arises if an appointment is made without the consent of the person appointed. The question here is how far can acts be unilateral? Similarly the question arises as to when the act is at an end, what counts as its completion?

In all this I would remind you that we were not invoking such further dimensions of unhappiness as may arise from, say, the performer making a simple mistake of fact or from disagreements over matters of fact, let alone disagreements of opinion; for example, there is no convention that I can promise you to do something to your detriment, thus putting myself under an obligation to you to do it; but suppose I say 'I promise to send you to a nunnery'—when I think, but you do not, that this will be for your good, or again when you think it will but I do not, or even when we both think it will, but in

1 It might thus be doubted whether failure to hand a gift over is a failure to complete the gift or an infelicity of type I'.
fact, as may transpire, it will not? Have I invoked a non-existent convention in inappropriate circumstances? Needless to say, and as a matter of general principle, there can be no satisfactory choice between these alternatives, which are too unsubtle to fit subtle cases. There is no short cut to expounding simply the full complexity of the situation which does not exactly fit any common classification.

It may appear in all this that we have merely been taking back our rules. But this is not the case. Clearly there are these six possibilities of infelicity even if it is sometimes uncertain which is involved in a particular case: and we might define them, at least for given cases, if we wished. And we must at all costs avoid over-simplification, which one might be tempted to call the occupational disease of philosophers if it were not their occupation.
LECTURE IV

Last time we were considering cases of Infelicities: and we dealt with cases where there was no procedure or no accepted procedure: where the procedure was invoked in inappropriate circumstances; and where the procedure was faultily executed or incompletely executed. And we pointed out that in particular cases these can be made to overlap; and that they generally overlap with Misunderstandings, a type of infelicity to which all utterances are probably liable, and Mistakes.

The last type of case is that of r. 1 and r. 2, insincerities and infractions or breaches.¹ Here, we say, the performance is not void, although it is still unhappy.

Let me repeat the definitions:

r. 1: where, as often, the procedure is designed for use by persons having certain thoughts, feelings, or intentions, or for the inauguration of certain consequential conduct on the part of any participant, then a person participating in and so invoking the procedure must in fact have those thoughts, feelings, or intentions, and the participants must intend so to conduct themselves;

r. 2: and the participants must so conduct themselves subsequently.

¹ See p. 18 and footnote.
I. Feelings

Examples of not having the requisite feelings are:

'I congratulate you', said when I did not feel at all pleased, perhaps even was annoyed.

'I condole with you', said when I did not really sympathize with you.

The circumstances here are in order and the act is performed, not void, but it is actually *insincere*; I had no business to congratulate you or to condole with you, feeling as I did.

2. Thoughts

Examples of not having the requisite thoughts are:

'I advise you to', said when I do not think it would be the course most expedient for you.

'I find him not guilty—I acquit', said when I do believe that he was guilty.

These acts are not void. I do advise and bring a verdict, though insincerely. Here there is an obvious parallel with one element in *lying*, in performing a speech-act of an *assertive* kind.

3. Intentions

Examples of not having the requisite intentions are:

'I promise', said when I do not intend to do what I promise.

'I bet', said when I do not intend to pay.

'I declare war', said when I do not intend to fight.
I am not using the terms ‘feelings’, ‘thoughts’, and ‘intentions’ in a technical as opposed to a loose way. But some comments are necessary:

(1) The distinctions are so loose that the cases are not necessarily easily distinguishable: and anyway, of course, the cases can be combined and usually are combined. For example, if I say ‘I congratulate you’, must we really have a feeling or rather a thought that you have done or deserved well? Have I a thought or a feeling that it was highly creditable? Or again in the case of promising I must certainly intend: but I must also think what I promise feasible and think perhaps that the promisee thinks it to be to his advantage, or think that it is to his advantage.

(2) We must distinguish really thinking it to be so—for example that he was guilty, that the deed was done by him, or that the credit was his, the feat was performed by him—from what we think to be so really being so, the thought being correct as opposed to mistaken. (Similarly, we can distinguish really feeling so from what we feel being justified, and really intending to from what we intend being feasible.) But thoughts are a most interesting, i.e. a confusing, case: there is insincerity here which is an essential element in lying as distinct from merely saying what is in fact false. Examples are thinking when I say ‘not guilty’ that the deed was done by him, or thinking when I say ‘I congratulate’ that the feat was not performed by him. But I may in fact be mistaken in so thinking.
If some at least of our thoughts are incorrect (as opposed to insincere), this may result in an infelicity of course of a different kind:

(a) I may give something which is not in fact (though I think it is) mine to give. We might say that this is 'Misapplication', that the circumstances, objects, persons, &c., are not appropriate for the procedure of giving. But we must remember that we said that we would rule out the whole dimension of what might well be called Infelicity but which arose from mistake and misunderstanding. It should be noted that mistake will not in general make an act void, though it may make it excusable.

(b) 'I advise you to do X' is a performative utterance; consider the case of my advising you to do something which is not in fact at all in your interest, though I think it is. This case is quite different from (1) in that here there is no temptation at all to think that the act of advising might be perhaps void or voidable, and likewise there is no temptation to think it insincere. Rather we here introduce an entirely new dimension of criticism again; we would criticize this as bad advice. That an act is happy or felicitous in all our ways does not exempt it from all criticism. We shall come back to this.

(3) More difficult than either of these cases is one to which we shall also return later. There is a class of performatives which I call verdictives: for example, when we say 'I find the accused guilty' or merely 'guilty', or

\[\text{[This presumably refers to the examples at the top of p. 40, not on p. 41. The manuscript gives no guidance. J. O. U.]}\]
when the umpire says 'out'. When we say 'guilty', this is happy in a way if we sincerely think on the evidence that he did it. But, of course, the whole point of the procedure in a way is to be correct; it may even be scarcely a matter of opinion, as above. Thus when the umpire says 'over', this terminates the over. But again we may have a 'bad' verdict: it may either be unjustified (jury) or even incorrect (umpire). So here we have a very unhappy situation. But still it is not infelicitous in any of our senses: it is not void (if the umpire says 'out', the batsman is out; the umpire's decision is final) and not insincere. However, we are not concerned now with these impending troubles but only to distinguish insincerity.

(4) In the case of intention too there are certain special awkwardnesses:

(a) We have already noticed the dubiety about what constitutes a subsequent action and what is merely the completion or consummation of the one, single, total action: for example, it is hard to determine the relation between

'I give' and surrendering possession,
'I do' (take this woman &c.) and consummation.
'I sell' and completion of sale:

though the distinction is easy in the case of promising. So there are similar possibilities of drawing distinctions in different ways over what is the requisite intention of performing a subsequent action and what is the requisite intention to complete the present action. This does not
raise any trouble in principle, however, about the concept of insincerity.

(b) We have distinguished roughly cases where you must have certain intentions from more particular cases where you must intend to carry out a certain further course of action, where use of the given procedure was precisely designed to inaugurate it (whether making it obligatory or permissive). Instances of this more specialized procedure are undertaking to perform an action, of course, and probably also christening. The whole point of having such a procedure is precisely to make certain subsequent conduct in order and other conduct out of order: and of course for many purposes, with, for example, legal formulas, this goal is more and more nearly approached. But other cases are not so easy: I may, for example, express my intention simply by saying ‘I shall...’. I must, of course, have the intention, if I am not to be insincere, at the time of my utterance: but what exactly is the degree or mode of the infelicity if I do not afterwards do it? Or again, in ‘I bid you welcome’, to say which is to welcome, intentions of a kind are presumably vaguely necessary: but what if one then behaves churlishly? Or again, I give you advice and you accept it, but then I round on you: how far is it obligatory on me not to do so? Or am I just ‘not expected’ to do so?: or is part of asking-and-taking advice definitely to make such subsequent conduct out of order? Or similarly, I entreat you to do something, you accede, and then I protest—am I out of order? Probably yes. But there is a
constant tendency to make this sort of thing clearer, as for example, when we move from ‘I forgive’ to ‘I pardon’ or from ‘I will’ either to ‘I intend’ or to ‘I promise’.

So much then for ways in which performative utterances can be unhappy, with the result that the ‘act’ concerned is merely purported or professed, &c. Now in general this amounted to saying, if you prefer jargon, that certain conditions have to be satisfied if the utterance is to be happy—certain things have to be so. And this, it seems clear, commits us to saying that for a certain performative utterance to be happy, certain statements have to be true. This in itself is no doubt a very trivial result of our investigations. Well, to avoid at least the infelicities that we have considered,

(1) what are these statements that have to be true? and
(2) can we say anything exciting about the relation of the performative utterance to them?

Remember that we said in the first Lecture that we might in some sense or way imply lots of things to be so when we say ‘I promise’, but this is completely different from saying that the utterance, ‘I promise’, is a statement, true or false, that these things are so. I shall take some important things which must be true if the performance is to be happy (not all—but even these will now seem boring and trivial enough: I hope so, for that will mean ‘obvious’ by now).

Now if when, for example, I say ‘I apologize’ I do
apologize, so that we can now say, I or he did definitely apologize, then

1. it is true and not false that I am doing (have done) something—actually numerous things, but in particular that I am apologizing (have apologized);
2. it is true and not false that certain conditions do obtain, in particular those of the kind specified in our Rules A. 1 and A. 2;
3. it is true and not false that certain other conditions obtain of our kind $\Gamma$, in particular that I am thinking something; and
4. it is true and not false that I am committed to doing something subsequently.

Now strictly speaking and importantly, the sense in which ‘I apologize’ implies the truth of each one of these has already been explained—we have been explaining this very thing. But what is of interest is to compare these ‘implications’ of performative utterances with certain discoveries made comparatively recently about the ‘implications’ of the contrasted and preferred type of utterance, the *statement* or constative utterance, which itself, unlike the performative, is true or false.

First to take (1): what is the relation between the utterance, ‘I apologize’, and the fact that I am apologizing? It is important to see that this is different from the relation between ‘I am running’ and the fact that I am running (or in case that is not a genuine ‘mere’ report—between ‘he is running’ and the fact that he is running).
This difference is marked in English by the use of the non-continuous present in performative formulas: it is not, however, necessarily marked in all languages—which may lack a continuous present—or even always in English.

We might say: in ordinary cases, for example running, it is the fact that he is running which makes the statement that he is running true; or again, that the truth of the constative utterance ‘he is running’ depends on his being running. Whereas in our case it is the happiness of the performative ‘I apologize’ which makes it the fact that I am apologizing: and my success in apologizing depends on the happiness of the performative utterance ‘I apologize’. This is one way in which we might justify the ‘performative-constative’ distinction—the distinction between doing and saying.

We shall next consider three of the many ways in which a statement implies the truth of certain other statements. One of those that I shall mention has been long known. The others have been discovered quite recently. We shall not put the matter too technically, though this can be done. I refer to the discovery that the ways we can do wrong, speak outrageously, in uttering conjunctions of ‘factual’ statements, are more numerous than merely by contradiction (which anyway is a complicated relation which requires both definition and explanation).

1. *Entails*

‘All men blush’ entails ‘some men blush’. We cannot
say 'All men blush but not any men blush', or 'the cat is under the mat and the cat is on top of the mat' or 'the cat is on the mat and the cat is not on the mat', since in each case the first clause entails the contradictory of the second.

2. **Implies**

My saying 'the cat is on the mat' implies that I believe it is, in a sense of 'implies' just noticed by G. E. Moore. We cannot say 'the cat is on the mat but I do not believe it is'. (This is actually not the ordinary use of 'implies': 'implies' is really weaker: as when we say 'He implied that I did not know it' or 'You implied you knew it (as distinct from believing it)').

3. **Presupposes**

'All Jack's children are bald' presupposes that Jack has some children. We cannot say 'All Jack's children are bald but Jack has no children', or 'Jack has no children and all his children are bald'.

There is a common feeling of outrage in all these cases. But we must not use some blanket term, 'implies' or 'contradiction', because there are very great differences. There are more ways of killing a cat than drowning it in butter; but this is the sort of thing (as the proverb indicates) we overlook: there are more ways of outraging speech than contradiction merely. The major questions are: how many ways, and why they outrage speech, and wherein the outrage lies?
Let us contrast the three cases in familiar ways:

1. **Entails**

If \( p \) entails \( q \) then \( \sim q \) entails \( \sim p \): if ‘the cat is on the mat’ entails ‘the mat is under the cat’ then ‘the mat is not under the cat’ entails ‘the cat is not on the mat’. Here the truth of a proposition entails the truth of a further proposition or the truth of one is inconsistent with the truth of another.

2. **Implies**

This is different: if my saying that the cat is on the mat implies that I believe it to be so, it is not the case that my not believing that the cat is on the mat implies that the cat is not on the mat (in ordinary English). And again, we are not concerned here with the inconsistency of propositions: they are perfectly compatible: it may be the case at once that the cat is on the mat but I do not believe that it is. But we cannot in the other case say ‘it may be the case at once that the cat is on the mat but the mat is not under the cat’. Or again, here it is saying that ‘the cat is on the mat’, which is not possible along with saying ‘I do not believe that it is’; the assertion implies a belief.

3. **Presupposes**

This again is unlike entailment: if ‘John’s children are bald’ presupposes that John has children, it is not true that John’s having no children presupposes that John’s
children are not bald. Moreover again, both ‘John’s children are bald’ and ‘John’s children are not bald’ alike presuppose that John has children: but it is not the case that both ‘the cat is on the mat’ and ‘the cat is not on the mat’ alike entail that the cat is below the mat.

Let us consider first ‘implies’ and then ‘presupposes’ over again:

*Implies*

Suppose I did say ‘the cat is on the mat’ when it is not the case that I believe that the cat is on the mat, what should we say? Clearly it is a case of insincerity. In other words: the unhappiness here is, though affecting a statement, exactly the same as the unhappiness infecting ‘I promise . . . ’ when I do not intend, do not believe, &c. The insincerity of an assertion is the same as the insincerity of a promise. ‘I promise but do not intend’ is parallel to ‘it is the case but I do not believe it’; to say ‘I promise’, without intending, is parallel to saying ‘it is the case’ without believing.

*Presupposition*

Next let us consider presupposition: what is to be said of the statement that ‘John’s children are all bald’ if made when John has no children? It is usual now to say that it is *not* false because it is devoid of reference; reference is necessary for either truth or falsehood. (Is it then meaningless? It is not so in every sense: it is not, like a ‘meaningless sentence’, ungrammatical, incom-
plete, mumbo-jumbo, &c.) People say 'the question does not arise'. Here I shall say 'the utterance is void'.

Compare this with our infelicity when we say 'I name . . . ', but some of the conditions (A. 1) and (A. 2) are not satisfied (specially A. 2 perhaps, but really equally—a parallel presupposition to A. 1 exists with statements also!). Here we might have used the 'presuppose' formula: we might say that the formula 'I do' presupposes lots of things: if these are not satisfied the formula is unhappy, void: it does not succeed in being a contract when the reference fails (or even when it is ambiguous) any more than the other succeeds in being a statement. Similarly the question of goodness or badness of advice does not arise if you are not in a position to advise me about that matter.

Lastly, it might be that the way in which in entailment one proposition entails another is not unlike the way 'I promise' entails 'I ought': it is not the same, but it is parallel: 'I promise but I ought not' is parallel to 'it is and it is not'; to say 'I promise' but not to perform the act is parallel to saying both 'it is' and 'it is not'. Just as the purpose of assertion is defeated by an internal contradiction (in which we assimilate and contrast at once and so stultify the whole procedure), the purpose of a contract is defeated if we say 'I promise and I ought not'. This commits you to it and refuses to commit you to it. It is a self-stultifying procedure. One assertion commits us to another assertion, one performance to another performance. Moreover, just as if $p$ entails $q$
then \( \sim q \) entails \( \sim p \), so 'I ought not' entails 'I do not promise'.

In conclusion, we see that in order to explain what can go wrong with statements we cannot just concentrate on the proposition involved (whatever that is) as has been done traditionally. We must consider the total situation in which the utterance is issued—the total speech-act—if we are to see the parallel between statements and performative utterances, and how each can go wrong. Perhaps indeed there is no great distinction between statements and performative utterances.
LECTURE V

At the end of the previous lecture we were reconsidering the question of the relations between the performative utterance and statements of various kinds which certainly are true or false. We mentioned as specially notable four such connexions:

(1) If the performative utterance 'I apologize' is happy, then the statement that I am apologizing is true.

(2) If the performative utterance 'I apologize' is to be happy, then the statement that certain conditions obtain—those notably in Rules A. 1 and A. 2—must be true.

(3) If the performative utterance 'I apologize' is to be happy, then the statement that certain other conditions obtain—those notably in our rule $F$. 1—must be true.

(4) If performative utterances of at least some kinds are happy, for example contractual ones, then statements of the form that I ought or ought not subsequently to do some particular thing are true.

I was saying that there seemed to be some similarity, and perhaps even an identity, between the second of these connexions and the phenomenon which has been called, in the case of statements as opposed to performatives, 'presupposition': and likewise between the third of these connexions and the phenomenon called (sometimes and not, to my mind, correctly) in the case of statements,
'implication'; these, presupposition and implication, being two ways in which the truth of a statement may be connected importantly with the truth of another without it being the case that the one entails the other in the sole sort of sense preferred by obsessional logicians. Only the fourth and last of the above connexions could be made out—I do not say how satisfactorily—to resemble entailment between statements. 'I promise to do X but I am under no obligation to do it' may certainly look more like a self-contradiction—whatever that is—than 'I promise to do X but I do not intend to do it': also 'I am under no obligation to do p' might be held to entail 'I did not promise to do p', and one might think that the way in which a certain p commits me to a certain q is not unlike the way in which promising to do X commits me to doing X. But I do not want to say that there is or is not any parallel here; only that at least there is a very close parallel in the other two cases; which suggest that at least in some ways there is danger of our initial and tentative distinction between constative and performative utterances breaking down.

We may, however, fortify ourselves in the conviction that the distinction is a final one by reverting to the old idea that the constative utterance is true or false and the performative is happy or unhappy. Contrast the fact that I am apologizing, which depends on the performative 'I apologize' being happy, with the case of the statement 'John is running', which depends for its truth on its being the fact or case that John is running. But perhaps
this contrast is not so sound either: for, to take statements first, connected with the utterance (constative) ‘John is running’ is the statement ‘I am stating that John is running’: and this may depend for its truth on the happiness of ‘John is running’, just as the truth of ‘I am apologizing’ depends on the happiness of ‘I apologize’. And, to take performatives second: connected with the performative (I presume it is one) ‘I warn you that the bull is about to charge’ is the fact, if it is one, that the bull is about to charge: if the bull is not, then indeed the utterance ‘I warn you that the bull is about to charge’ is open to criticism—but not in any of the ways we have hitherto characterized as varieties of unhappiness. We should not in this case say the warning was void—i.e. that he did not warn but only went through a form of warning—nor that it was insincere: we should feel much more inclined to say the warning was false or (better) mistaken, as with a statement. So that considerations of the happiness and unhappiness type may infect statements (or some statements) and considerations of the type of truth and falsity may infect performatives (or some performatives).

We have then to take a further step out into the desert of comparative precision. We must ask: is there some precise way in which we can definitely distinguish the performative from the constative utterance? And in particular we should naturally ask first whether there is some grammatical (or lexicographical) criterion for distinguishing the performative utterance.
So far we have considered only a small number of classic examples of performatives, all with verbs in the first person singular present indicative active. We shall see very shortly that there were good reasons for this piece of slyness. Examples are ‘I name’, ‘I do’, ‘I bet’, ‘I give’. There are fairly obvious reasons, with which I shall nevertheless shortly deal, why this is the commonest type of explicit performative. Note that ‘present’ and ‘indicative’ are, of course, both misnomers (not to mention the misleading implications of ‘active’) — I am only using them in the well-known grammatical way. For example the ‘present’, as distinct from ‘continous present’, is normally nothing to do with describing (or even indicating) what I am doing at present. ‘I drink beer’, as distinct from ‘I am drinking beer’, is not analogous to a future and a past tense describing what I shall do in the future or have done in the past. It is really more commonly the habitual indicative, when it is ‘indicative’ at all. And where it is not habitual but in a way ‘present’ genuinely, as in a way it is in performatives, if you like, such as ‘I name’, then it is certainly not ‘indicative’ in the sense grammarians intend, that is reporting, describing, or informing about an actual state of affairs or occurrent event: because, as we have seen, it does not describe or inform at all, but is used for, or in, the doing of something. So we use ‘present indicative’ merely to mean the English grammatical form ‘I name’, ‘I run’, &c. (This mistake in terminology is due to assimilating, for example, ‘I run’ to the Latin curro, which should really generally be
translated 'I am running'; Latin does not have two tenses where we do.)

Well, is the use of the first person singular and of the present indicative active, so called, essential to a performative utterance? We need not waste our time on the obvious exception of the first person plural, 'we promise . . .', 'we consent', &c. There are more important and obvious exceptions all over the place (some of which have already been alluded to in passing).

A very common and important type of, one would think, indubitable performative has the verb in the second or third person (singular or plural) and the verb in the passive voice: so person and voice anyway are not essential. Some examples of this type are:

(1) You are hereby authorized to pay . . .
(2) Passengers are warned to cross the track by the bridge only.

Indeed the verb may be 'impersonal' in such cases with the passive, for example:

(3) Notice is hereby given that trespassers will be prosecuted.

This type is usually found on formal or legal occasions; and it is characteristic of it that, in writing at least, the word 'hereby' is often and perhaps can always be inserted; this serves to indicate that the utterance (in writing) of the sentence is, as it is said, the instrument effecting the act of warning, authorizing, &c. 'Hereby' is a useful criterion that the utterance is performative. If it is not
put in, ‘passengers are warned to cross the track by the bridge only’ may be used for the description of what usually happens: ‘on nearing the tunnel, passengers are warned to duck their heads, &c.’

However, if we turn away from these highly formalized and explicit performative utterances, we have to recognize that mood and tense (hitherto retained as opposed to person and voice) break down as absolute criteria.

Mood will not do, for I may order you to turn right by saying, not ‘I order you to turn right’, but simply ‘Turn right’; I may give you permission to go by saying simply ‘You may go’; and instead of ‘I advise [or “recommend”] you to turn right’ I may say ‘I should turn to the right if I were you’. Tense will not do either, for in giving (or calling) you off-side I may say, instead of ‘I give [or “call”] you off-side’, simply ‘You were off-side’; and similarly, instead of saying ‘I find you guilty’ I may just say ‘You did it’. Not to mention cases where we have only a truncated sentence, as when I accept a bet by saying simply ‘Done’, and even cases where there is no explicit verb at all, as when I say simply ‘Guilty’ in finding a person guilty, or ‘Out’ to give someone out.

Particularly with some special performative-looking words, for example ‘off-side’, ‘liable’, &c., we seem able to refute even the rule governing the use of the active or passive which we gave above. Instead of ‘I pronounce you off-side’ I might say ‘You are off-side’ and I might say ‘I am (hereby rendered) liable’ instead of ‘I undertake . . . ’. So we might think certain words might do
as a test of the performative utterance, that we could do it by means of vocabulary as distinct from grammar. Such words might be ‘off-side’, ‘authorized’, ‘promise’, ‘dangerous’, &c. But this will not do, for:

I. We may get the performative without the operative words thus:

(1) In place of ‘dangerous corner’ we may have ‘corner’, and in place of ‘dangerous bull’ we may write ‘bull’.

(2) In place of ‘you are ordered to . . . ’, we may have ‘you will’, and in place of ‘I promise to . . . ’ we may have ‘I shall’.

II. We may get the operative word without the utterance being performative, thus:

(1) In cricket a spectator may say ‘it was over (really)’. Similarly I may say ‘you were guilty’ or ‘you were off-side’ or even ‘you are guilty (off-side)’ when I have no right to pronounce you guilty or off-side.

(2) In such locutions as ‘you promised’, ‘you authorize’ &c., the word occurs in a non-performative use.

This reduces us to an impasse over any single simple criterion of grammar or vocabulary. But maybe it is not impossible to produce a complex criterion, or at least a set of criteria, simple or complex, involving both grammar and vocabulary. For example, one of the criteria might be that everything with the verb in the imperative mood is performative (this leads, however, to
many troubles over, for example, when a verb is in the imperative mood and when it is not, into which I do not propose to go).

I would rather go back a minute and consider whether there was not some good reason behind our initial favouritism for verbs in the so-called 'present indicative active'.

We said that the idea of a performative utterance was that it was to be (or to be included as a part of) the performance of an action. Actions can only be performed by persons, and obviously in our cases the utterer must be the performer: hence our justifiable feeling—which we wrongly cast into purely grammatical mould—in favour of the 'first person', who must come in, being mentioned or referred to; moreover, if the utterer is acting, he must be doing something—hence our perhaps ill-expressed favouring of the grammatical present and grammatical active of the verb. There is something which is at the moment of uttering being done by the person uttering.

Where there is not, in the verbal formula of the utterance, a reference to the person doing the uttering, and so the acting, by means of the pronoun 'I' (or by his personal name), then in fact he will be 'referred to' in one of two ways:

(a) In verbal utterances, by his being the person who does the uttering—what we may call the utterance-origin which is used generally in any system of verbal reference-co-ordinates.

(b) In written utterances (or 'inscriptions), by his appending his signature (this has to be done because, of
course, written utterances are not tethered to their origin in the way spoken ones are).

The ‘I’ who is doing the action does thus come essentially into the picture. An advantage of the original first person singular present indicative active form—or likewise of the second and third and impersonal passive forms with signature appended—is that this implicit feature of the speech-situation is made *explicit*. Moreover, the verbs which seem, on grounds of vocabulary, to be specially performative verbs serve the special purpose of *making explicit* (which is not the same as stating or describing) what precise action it is that is being performed by the issuing of the utterance: other words which seem to have a special performative function (and indeed *have* it), such as ‘guilty’, ‘off-side’, &c., do so because, in so far as and when they are linked in ‘origin’ with these special explicit performative verbs like ‘promise’, pronounc’, ‘find’, &c.

The ‘hereby’ formula is a useful alternative; but it is rather too formal for ordinary purposes, and further, we may say ‘I hereby state . . .’ or ‘I hereby question . . .’, whereas we were hoping to find a criterion to distinguish statements from performatives. (I must explain again that we are floundering here. To feel the firm ground of prejudice slipping away is exhilarating, but brings its revenges.)

Thus what we should feel tempted to say is that any utterance which is in fact a performative should be reducible, or expandible, or analysable into a form with
a verb in the first person singular present indicative active (grammatical). This is the sort of test we were in fact using above. Thus:

‘Out’ is equivalent to ‘I declare, pronounce, give, or call you out’ (when it is a performative: it need not be, for example, if you are called out by someone not the umpire or recorded as ‘out’ by the scorer).

‘Guilty’ is equivalent to ‘I find, pronounce, deem you to be guilty.’

‘You are warned that the bull is dangerous’ is equivalent to ‘I, John Jones, warn you that the bull is dangerous’ or

This bull is dangerous.

(Signed) John Jones.

This sort of expansion makes explicit both that the utterance is performative, and which act it is that is being performed. Unless the performative utterance is reduced to such an explicit form, it will regularly be possible to take it in a non-performative way: for example, ‘it is yours’ may be taken as equivalent to either ‘I give it you’ or ‘it (already) belongs to you’. In fact there is rather a play on the performative and non-performative uses in the road sign ‘You have been warned’.

However, though we might make progress along these lines (there are snags)\(^1\) we must notice that this first

\(^1\) For example, which are the verbs with which we can do this? If the performative is expanded, what is the test whether the first person singular present indicative active is on this occasion performative granted that all others have to be reducible (save the mark!) to this formal form?
person singular present indicative active, so called, is a peculiar and special use. In particular we must notice that there is an asymmetry of a systematic kind between it and other persons and tenses of the very same verb. The fact that there is this asymmetry is precisely the mark of the performative verb (and the nearest thing to a grammatical criterion in connexion with performatives).

Let us take an example: the uses of 'I bet' as opposed to the use of that verb in another tense or in another person. 'I betted' and 'he bets' are not performatives but describe actions on my and his part respectively—actions each consisting in the utterance of the performative 'I bet'. If I utter the words 'I bet . . . ', I do not state that I utter the words 'I bet', or any other words, but I perform the act of betting; and similarly, if he says he bets, i.e. says the words 'I bet', he bets. But if I utter the words 'he bets', I only state that he utters (or rather has uttered) the words 'I bet': I do not perform his act of betting, which only he can perform: I describe his performances of the act of betting, but I do my own betting, and he must do his own. Similarly an anxious parent when his child has been asked to do something may say 'he promises, don’t you Willy?' but little Willy must still himself say 'I promise' if he is really to have promised. Now this sort of asymmetry does not arise at all in general with verbs that are not used as explicit performatives. For example, there is no such asymmetry between 'I run' and 'He runs'.

Still, it is doubtful whether this is a 'grammatical'
criterion exactly (what is?), and anyway it is not very exact because:

(1) The first person singular present indicative active may be used to describe how I habitually behave: ‘I bet him (every morning) sixpence that it will rain’ or ‘I promise only when I intend to keep my word’.

(2) The first person singular present indicative active may be used in a way similar to the ‘historic’ present. It may be used to describe my own performances elsewhere and elsewhen: ‘on page 49 I protest against the verdict’. We might back this up by saying that performative verbs are not used in the present continuous tense (in the first person singular active): we do not say ‘I am promising’, and ‘I am protesting’. But even this is not entirely true, because I can say ‘Don’t bother me at the moment; I will see you later; I am marrying’ at any moment during the ceremony when I am not having to say other words such as ‘I do’; here the utterance of the performative is not the whole of the performance, which is protracted and contains diverse elements. Or I can say ‘I am protesting’ when performing the act by, in this case, means other than saying ‘I protest’, for example by chaining myself to park railings. Or I can even say ‘I am ordering’ while writing the words ‘I order’.

(3) Some verbs may be used in the first person singular present indicative active simultaneously in two ways. An example is ‘I call’, as when I say ‘I call inflation too much money chasing too few goods’ which embraces both a
performative utterance and a description of a naturally consequent performance.

(4) We shall be in apparent danger of bringing in many formulas which we might not like to class as performatives; for example ‘I state that’ (to utter which is to state) as well as ‘I bet that’.

(5) We have cases of suit ing the action to the word: thus I may say ‘I spit me of you’ or j’adoube said when I give check, or ‘I quote’ followed by actually quoting. If I define by saying ‘I define $x$ as follows: $x$ is $y$’, this is a case of suit ing the action (here giving a definition) to the word; when we use the formula ‘I define $x$ as $y$’ we have a transition to a preformative utterance from suit ing the action to the word. We might add, too, that there is likewise a transition from the use of words as what we may call markers, to performatives. There is a transition from the word END at the end of a novel to the expression ‘message ends’ at the end of a signal message, to the expression ‘with that I conclude my case’ as said by Counsel in a law court. These, we may say, are cases of marking the action by the word, where eventually the use of the word comes to be the action of ‘ending’ (a difficult act to perform, being the cessation of acting, or to make explicit in other ways, of course).

(6) Is it always the case that we must have a performative verb for making explicit something we are undoubtedly doing by saying something? For example, I may insult you by saying something, but we have not the formula ‘I insult you’.
(7) Is it really the case that we can always put a performative into the normal form without loss? ‘I shall . . .’ can be meant in different ways; perhaps we trade on this. Or again we say ‘I am sorry’; is this really exactly like the explicit ‘I apologize’?

We shall have to revert to the notion of the explicit performative, and we must discuss historically at least how some of these perhaps not ultimately serious perplexities arise.
LECTURE VI

BECAUSE we suggested that the performative is not altogether so obviously distinct from the constative—the former happy or unhappy, the latter true or false—we were considering how to define the performative more clearly. The first suggestion was a criterion or criteria of grammar or of vocabulary or of both. We pointed out that there was certainly no one absolute criterion of this kind: and that very probably it is not possible to lay down even a list of all possible criteria; moreover, they certainly would not distinguish performatives from constatives, as very commonly the same sentence is used on different occasions of utterance in both ways, performative and constative. The thing seems hopeless from the start, if we are to leave utterances as they stand and seek for a criterion.

But nevertheless the type of performative upon which we drew for our first examples, which has a verb in the first person singular present indicative active, seems to deserve our favour: at least, if issuing the utterance is doing something, the ‘I’ and the ‘active’ and the ‘present’ seem appropriate. Though indeed performatives are not really like the remainder of the verbs in this ‘tense’ at all; there is an essential asymmetry with these verbs. This asymmetry is just the characteristic of a long list of
performative-looking verbs. The suggestion is, then, that we might

(1) make a list of all verbs with this peculiarity;
(2) suppose that all performative utterances which are not in fact in this preferred form—beginning 'I x that', 'I x to', or 'I x'—could be 'reduced' to this form and so rendered what we may call explicit performatives.

We are now asking: just how easy—even possible—is this going to be? It is fairly easy to make allowances for certain normal enough but different uses of the first person of the present indicative active even with these verbs, which may well be constative or descriptive, that is, the habitual present, the 'historic' (quasi-) present, and the continuous present. But then, as I was hastily mentioning, in conclusion, there are still further difficulties: we mentioned three as typical.

(1) 'I class' or perhaps 'I hold' seems in a way one, in a way the other. Which is it, or is it both?
(2) 'I state that' seems to conform to our grammatical or quasi-grammatical requirements: but do we want it in? Our criterion, such as it is, seems in danger of letting in non-performatives.
(3) Sometimes saying something seems to be characteristically doing something—for example insulting somebody, like reprimanding somebody: yet there is no performative 'I insult you'. Our criterion will not get in all cases of the issuing of an utterance being the
doing of something, because the 'reduction' to an explicit performative does not seem always possible.

Let us pause then to dwell a little more on the expression 'explicit performative', which we have introduced rather surreptitiously. I shall oppose it to 'primary performative' (rather than to inexplicit or implicit performative). We gave as an example:

(1) primary utterance: 'I shall be there',
(2) explicit performative: 'I promise that I shall be there', and we said that the latter formula made explicit what action it is that is being performed in issuing the utterance: i.e. 'I shall be there'. If someone says 'I shall be there', we might ask: 'Is that a promise?' We may receive the answer 'Yes', or 'Yes, I promise it' (or 'that ...' or 'to ...'), whereas the answer might have been only: 'No, but I do intend to be' (expressing or announcing an intention), or 'No, but I can foresee that, knowing my weaknesses, I (probably) shall be there'.

Now we must enter two caveats: 'making explicit' is not the same as describing or stating (at least in philosophers' preferred senses of these words) what I am doing. If 'making explicit' conveys this, then pro tanto it is a bad term. The situation in the case of actions which are non-linguistic but similar to performative utterances in that they are the performance of a conventional action (here ritual or ceremonial) is rather like this: suppose I bow deeply before you; it might not be clear whether I am doing obeisance to you or, say, stooping to observe the flora or to ease my indigestion. Generally speaking,
then, to make clear both that it is a conventional ceremonial act, and which act it is, the act (for example of doing obeisance) will as a rule include some special further feature, for example raising my hat, tapping my head on the ground, sweeping my other hand to my heart, or even very likely uttering some noise or word, for example ‘Salaam’. Now uttering ‘Salaam’ is no more describing my performance, stating that I am performing an act of obeisance, than is taking off my hat: and by the same token (though we shall come back to this) saying ‘I salute you’ is no more describing my performance than is saying ‘Salaam’. To do or to say these things is to make plain how the action is to be taken or understood, what action it is. And so it is with putting in the expression ‘I promise that’. It is not a description, because (1) it could not be true or false; (2) saying ‘I promise that’ (if happy, of course) makes it a promise, and unambiguously a promise. Now we can say that such a performative formula as ‘I promise’ makes it clear how what is said is to be understood and even conceivably that the formula ‘states that’ a promise has been made; but we cannot say that such utterances are true or false, nor that they are descriptions or reports.

Secondly, a minor caution: notice that, although we have in this type of utterance a ‘that-’ clause following a verb, for example ‘promise’, or ‘find’, or ‘pronounce’ (or perhaps such verbs as ‘estimate’), we must not allude to this as ‘indirect speech’. ‘That’-clauses in indirect speech or oratio obliqua are of course cases where I report what
someone else or myself elsewhere did say: for example, typically, ‘he said that . . .’, but also possibly ‘he promised that . . .’ (or is this a double use of ‘that’?), or ‘on page 456 I declared that . . .’. If this is a clear notion\(^1\) we see that the ‘that’ of oratio obliqua is not in all ways similar to the ‘that’ in our explicit performative formulas: here I am not reporting my own speech in the first person singular present indicative active. Incidentally, of course, it is not in the least necessary that an explicit performative verb should be followed by ‘that’: in important classes of cases it is followed by ‘to . . .’ or nothing, for example, ‘I apologize (for . . .)’, ‘I salute you’.

Now, one thing that seems at least a fair guess, even from the elaboration of the linguistic construction, as also from its nature in the explicit performative is this: that historically, from the point of view of the evolution of language, the explicit performative must be a later development than certain more primary utterances, many of which at least are already implicit performatives, which are included in most or many explicit performatives as parts of a whole. For example, ‘I will . . .’ is earlier than ‘I promise that I will . . .’. The plausible view (I do not know exactly how it would be established) would be that in primitive languages it would not yet be clear, it would not yet be possible to distinguish, which of various things that (using later distinctions) we might be doing

\(^1\) My explanation is very obscure, like those of all grammar books on ‘that’ clauses: compare their even worse explanation of ‘what’ clauses.
we were in fact doing. For example ‘Bull’ or ‘Thunder’ in a primitive language of one-word utterances\(^1\) could be a warning, information, a prediction, \&c. It is also a plausible view that explicitly distinguishing the different *forces* that this utterance might have is a later achievement of language, and a considerable one; primitive or primary forms of utterance will preserve the ‘ambiguity’ or ‘equivocation’ or ‘vagueness’ of primitive language in this respect; they will not make explicit the precise force of the utterance. This may have its uses: but sophistication and development of social forms and procedures will necessitate clarification. But note that this clarification is as much a creative act as a discovery or description! It is as much a matter of making clear distinctions as of making already existent distinctions clear.

One thing, however, that it will be most dangerous to do, and that we are very prone to do, is to take it that we somehow *know* that the primary or primitive use of sentences must be, because it ought to be, statemental or constative, in the philosophers’ preferred sense of simply uttering something whose sole pretension is to be true or false and which is not liable to criticism in any other dimension. We certainly do not know that this is so, any more, for example, than, to take an alternative, that all utterances must have first begun as swear-words—and it seems much more likely that the ‘pure’ statement is a goal, an ideal, towards which the gradual development of science has given the impetus, as it has likewise also

\(^1\) As in fact primitive languages probably were, cf. Jespersen.
towards the goal of precision. Language as such and in its primitive stages is not precise, and it is also not, in our sense, explicit: precision in language makes it clearer what is being said—its meaning: explicitness, in our sense, makes clearer the force of the utterances, or 'how (in one sense; see below) it is to be taken'.

The explicit performative formula, moreover, is only the last and 'most successful' of numerous speech-devices which have always been used with greater or less success to perform the same function (just as measurement or standardization was the most successful device ever invented for developing precision of speech).

Consider for a moment some of these other more primitive devices in speech, some of the roles which can (though, of course, not without change or loss, as we shall see) be taken over by the device of the explicit performative.

1. Mood

We have already mentioned the exceedingly common device of using the imperative mood. This makes the utterance a 'command' (or an exhortation or permission or concession or what not!) Thus I may say 'shut it' in many contexts:

'Shut it, do' resembles the performative 'I order you to shut it'.

'Shut it—I should' resembles the performative 'I advise you to shut it'.

'Shut it, if you like' resembles the performative 'I permit you to shut it'.

How to do things with Words
'Very well then, shut it' resembles the performative 'I consent to your shutting it'.
'Shut it if you dare' resembles the performative 'I dare you to shut it'. Or again we may use auxiliaries:
'You may shut it' resembles the performative 'I give permission, I consent, to your shutting it'.
'You must shut it' resembles the performative 'I order you, I advise you, to shut it'.
'You ought to shut it' resembles 'I advise you to shut it'.

2. Tone of voice, cadence, emphasis

(Similar to this is the sophisticated device of using stage directions; for example, 'threateningly', &c.) Examples of this are:

- It's going to charge! (a warning);
- It's going to charge? (a question);
- It's going to charge!? (a protest).

These features of spoken language are not reproducible readily in written language. For example we have tried to convey the tone of voice, cadence and emphasis of a protest by the use of an exclamation mark and a question mark (but this is very jejune). Punctuation, italics, and word order may help, but they are rather crude.

3. Adverbs and adverbial phrases

But in written language—and even, to some extent, in spoken language, though there they are not so necessary
—we rely on adverbs, adverbial phrases, or turns of phrase. Thus we can qualify the force of 'I shall' by adding 'probably' or—in an opposite sense—by adding 'without fail'; we can give emphasis (to a reminder or whatever it may be) by writing 'You would do well never to forget that . . .'. Much could be said about the connexions here with the phenomena of evincing, intimating, insinuation, innuendo, giving to understand, enabling to infer, conveying, 'expressing' (odious word) all of which are, however, essentially different, though they involve the employment of very often the same or similar verbal devices and circumlocutions. We shall revert to the important and different distinction between these phenomena in the latter half of our lectures.

4. Connecting particles

At a more sophisticated level, perhaps, comes the use of the special verbal device of the connecting particle; thus we may use the particle 'still' with the force of 'I insist that'; we use 'therefore' with the force of 'I conclude that'; we use 'although' with the force of 'I concede that'. Note also the uses of 'whereas' and 'hereby' and 'moreover'.¹ A very similar purpose is served by the use of titles such as Manifesto, Act, Proclamation, or the subheading 'A Novel . . .'.

Turning from what we say and the manner of speaking

¹ But some of these examples raise the old question whether 'I concede that' and 'I conclude that' are performatives or not.
it, there are other essential devices by which the force of the utterance is to some extent got across:

5. Accompaniments of the utterance

We may accompany the utterance of the words by gestures (winks, pointings, shruggings, frowns, &c.) or by ceremonial non-verbal actions. These may sometimes serve without the utterance of any words, and their importance is very obvious.

6. The circumstances of the utterance

An exceedingly important aid is the circumstances of the utterance. Thus we may say ‘coming from him, I took it as an order, not as a request’; similarly the context of the words ‘I shall die some day’, ‘I shall leave you my watch’, in particular the health of the speaker, make a difference how we shall understand them.

But in a way these resources are over-rich: they lend themselves to equivocation and inadequate discrimination; and moreover, we use them for other purposes, e.g. insinuation. The explicit performative rules out equivocation and keeps the performance fixed, relatively.

The trouble about all these devices has been principally their vagueness of meaning and uncertainty of sure reception, but there is also probably some positive inadequacy in them for dealing with anything like the complexity of the field of actions which we perform with words. An ‘imperative’ may be an order, a permission, a demand, a request, an entreaty, a suggestion, a recom-
mendation, a warning ('go and you will see'), or may express a condition or concession or a definition ('Let it...'), &c. To hand something over to someone may be, when we say 'Take it', the giving it or lending it or leasing it or entrusting it. To say 'I shall' may be to promise, or to express an intention, or to forecast my future. And so on. No doubt a combination of some or all the devices mentioned above (and very likely there are others) will usually, if not in the end, suffice. Thus when we say 'I shall' we can make it clear that we are forecasting by adding the adverbs 'undoubtedly' or 'probably', that we are expressing an intention by adding the adverbs 'certainly' or 'definitely', or that we are promising by adding the adverbial phrase 'without fail', or saying 'I shall do my best to'.

It should be noted that when performative verbs exist we can use them not only in 'that...' or 'to...' formulas, but also in stage directions ('welcomes'), titles ('warning!'), and parentheses (this is almost as good a test of a performative as our normal forms); and we must not forget the use of special words such as 'Out', &c., which have no normal form.

However, the existence and even the use of explicit performatives does not remove all our troubles.

(1) In philosophy, we can even raise the trouble of the liability of performatives to be mistaken for descriptives or constatives.

(1a) Nor, of course, is it merely that the performative does not preserve the often congenial equivocation of
primary utterances; we must also in passing consider cases where it is doubtful whether the expression is an explicit performative or not and cases very similar to performatives but not performatives.

(2) There seem to be clear cases where the very same formula seems sometimes to be an explicit performative and sometimes to be a descriptive, and may even trade on this ambivalence: for example, ‘I approve’ and ‘I agree’. Thus ‘I approve’ may have the performative force of giving approval or it may have a descriptive meaning: ‘I favour this’.

We shall consider two classic sorts of case in which this will arise. They exhibit some of the phenomena incidental to the development of explicit performative formulas.

There are numerous cases in human life where the feeling of a certain ‘emotion’ (save the word!) or ‘wish’ or the adoption of an attitude is conventionally considered an appropriate or fitting response or reaction to a certain state of affairs, including the performance by someone of a certain act, cases where such a response is natural (or we should like to think so!) In such cases it is, of course, possible and usual actually to feel the emotion or wish in question; and since our emotions or wishes are not readily detectable by others, it is common to wish to inform others that we have them. Understandably, though for slightly different and perhaps less estimable reasons in different cases, it becomes de rigueur to ‘express’ these feelings if we have them, and further even to
express them when they are felt fitting, regardless of whether we really feel anything at all which we are reporting. Examples of expressions so used are:

I thank            I am grateful            I feel grateful
I apologize       I am sorry             I repent
I criticize)      I blame                I am shocked by
I censure)        I approve of           I am revolted by
I approve         I welcome             I feel approval
I bid you welcome I welcome             I am glad about
I congratulate    I am glad about

In these lists, the first column contains performative utterances; those in the second are not pure but half descriptive, and in the third are merely reports. There are then here numerous expressions, among them many important ones, which suffer from or profit by a sort of deliberate ambivalence, and this is fought by the constant introduction of deliberately pure performative phrases. Can we suggest any tests for deciding whether 'I approve of' or 'I am sorry' is being used (or even is always used) in the one way or the other?

One test would be whether it makes sense to say 'Does he really?' For example, when someone says 'I welcome you' or 'I bid you welcome', we may say 'I wonder if he really did welcome him?' though we could not say in the same way 'I wonder whether he really does bid him welcome?' Another test would be whether one could really be doing it without actually saying anything, for example in the case of being sorry as distinct from apologizing, in
being grateful as distinct from thanking, in blaming as distinct from censuring. Yet a third test would be, at least in some cases, to ask whether we could insert before the supposed performative verb some such adverb as 'deliberately' or such an expression as 'I am willing to': because (possibly) if the utterance is the doing of an action, then it is surely something we ought to be able (on occasion) to do deliberately or to be willing to do. Thus we may say: 'I deliberately bade him welcome', 'I deliberately approved his action', 'I deliberately apologized', and we can say 'I am willing to apologize'. But we cannot say 'I deliberately approved of his action' or 'I am willing to be sorry' (as distinct from 'I am willing to say I am sorry').

A fourth test would be to ask whether what one says could be literally false, as sometimes when I say 'I am sorry', or could only involve insincerity (unhappiness) as sometimes when I say 'I apologize': these phrases blur the distinction between insincerity and falsehood. But there is here a certain distinction to be drawn in passing of the exact nature of which I am uncertain: we have related 'I apologize' to 'I am sorry' as above; but now there are also very numerous conventional expressions of feeling, very similar in some ways, which are

1 There are classic doubts about the possibility of tacit consent; here non-verbal performance occurs in an alternative form of performative act: this casts doubt on this second test!

2 There are parallel phenomena to these in other cases: for example a specially confusing one arises over what we may call dictional or expository performatives.
certainly nothing to do with performatives: for example:

'I have pleasure in calling upon the next speaker'.
'I am sorry to have to say . . .'.
'I am gratified to be in a position to announce . . .'.\(^1\)

We may call these *polite* phrases, like 'I have the honour to . . .'. It is conventional enough to formulate them in this way: but it is *not* the case that to say you have pleasure in *is* to have pleasure in doing something. Unfortunately. To be a performative utterance, even in these cases connected with feelings and attitudes which I christen 'BEHABITIVES', is not *merely* to be a conventional expression of feeling or attitude.

Also to be distinguished are cases of *suiting the action to the word*—a special type of case which may generate performatives but which is not in itself a case of the performative utterance. A typical case is: 'I slam the door thus' (he slams the door). But this sort of case leads to 'I salute you' (he salutes); here 'I salute you' may become a substitute for the salute and thus a pure performative utterance. To say 'I salute you' now *is* to salute you. Compare the expression 'I salute the memory . . .'.

But there are many transitional stages between suit ing the action to the word and the pure performative:

'Snap.' To say this is to snap (in appropriate circumstances); but it is not a snap if 'snap' is not said.

\(^1\) [Marginal note in manuscript: 'Further classification needed here: just note it in passing.']]
‘Check.’ To say it is to check in appropriate circumstances. But would it not still be a check if ‘check’ were not said?

‘J’adoube.’ Is this suiting the action to the word or is it part of the act of straightening the piece as opposed to moving it?

Perhaps these distinctions are not important: but there are similar transitions in the case of performatives, as for example:

‘I quote’: he quotes.
‘I define’: he defines (e.g. \( x \) is \( y \)).
‘I define \( x \) as \( y \)’.

In these cases the utterance operates like a title: is it a variety of performative? It essentially operates where the action suited to the word is itself a verbal performance.
LECTURE VII

LAST time we considered the Explicit in contrast with the Primary Performative, claiming that the former would be naturally evolved from the latter as language and society develop. We said, however, that this would not remove all our troubles in our search for a list of explicit performative verbs. We gave some examples which incidentally illustrated how the explicit performative develops from the primary.

We took examples from the sphere of what may be called behabitives, a kind of performative concerned roughly with reactions to behaviour and with behaviour towards others and designed to exhibit attitudes and feelings.

Contrast:

<table>
<thead>
<tr>
<th>Explicit Performative</th>
<th>Not Pure (half descriptive)</th>
<th>Descriptive</th>
</tr>
</thead>
<tbody>
<tr>
<td>I apologize</td>
<td>I am sorry</td>
<td>I repent</td>
</tr>
<tr>
<td>I criticize</td>
<td>I blame</td>
<td>I am disgusted by</td>
</tr>
<tr>
<td>I censure</td>
<td>I approve of</td>
<td>I feel approval of</td>
</tr>
<tr>
<td>I approve</td>
<td>I welcome you</td>
<td></td>
</tr>
</tbody>
</table>

We suggested tests of the pure explicit performative:

(1) Does it make sense (or the same sense) to ask 'But
APPENDIX

The main use of the sets of hearers' lecture notes, the B.B.C. talk on Performatives printed in the Collected Papers, the paper delivered at Royaumont under the title 'Performatif—Constatif', and the tape of the lecture given at Gothenberg in October 1959, has been to check the reconstruction of the text initially made independently from Austin's own files of notes. Austin's own notes were found at almost all points to need little supplementation from the secondary sources, being much fuller than any of them. Some characteristic examples have been added from these sources, and also some characteristic phrases at points where Austin's own notes were not in literary form. The main value of the secondary sources has been as a check on order and interpretation at points where the notes are fragmentary.

A list of the more important places at which additions to, and reconstructions of, Austin's text have been made is appended.

Page 28. The example about George is incomplete in the notes. The text is based mainly on the B.B.C. version.

Page 32. 2 lines from the foot to the end of the paragraph on page 33, is an editorial expansion of very succinct notes.

Page 35. All from the top of the page until, but exclusive of, the final paragraph of the lecture is a composite version from various incomplete versions in notes of differing dates made by Austin.

Page 52. The final paragraph is an expansion of Austin's notes based mainly on those of Mr. George Pitcher.
Page 64. From this point to the end of the lecture the text is conflated from two sets of notes by Austin made prior to 1955. The 1955 notes are fragmentary at this point.

Page 70. 'Now we can say' to the end of the paragraph is a conjectural expansion of Austin’s notes, which read: 'Now we use “how it is to be understood” and “making clear” (and even, conceivably, “state that”): but not true or false, not description or report.'

Page 93. In Austin’s notes Lecture VII ends here. It appears from Harvard notes that there the earlier part of Lecture VIII was included in Lecture VII.

Page 105. At line 2 ‘like implying’ is based on Pitcher’s notes. Austin has ‘Or “imply”, is it the same?’

Page 105. Paragraph (5) is expanded on the basis of hearers’ notes. The first 2½ lines only are in Austin’s notes.

Page 107. Line 2 to the end of the paragraph is added on the basis of secondary sources. It is not in Austin’s notes.

Pages 115 and 116. The illustrations to (1) and (2) are added from Pitcher’s notes.

Page 117. The paragraph beginning ‘So here are . . .’ is added from Pitcher’s notes.

Page 121. Line 3 ‘A judge . . .’ to the end of the paragraph is added from Pitcher’s notes.

Page 123. The ‘iced ink’ example, though famous among Austin’s pupils, is not in the notes. It is added from many secondary sources.

Page 124. Lines 1–4 are not in Austin’s notes; the sentence is based mainly on Pitcher.

Page 129. (a) and (b) are an expansion of very succinct notes based on secondary sources.
Appendix

Pages 142 and 143. The paragraph beginning ‘Third . . .’ has been expanded on the basis of Messrs. Pitcher’s and Demos’s notes.

Page 162. ‘I have as usual failed . . .’ to the end is an expansion of Austin’s notes based partly on a separate short manuscript note by Austin and confirmed by hearers’ notes.
